Know the scientist

Vera Rubin was an American astronomer who brought dark matter to light.

She found that galaxies did not rotate as people thought they did. Rubin argued that galaxies might be rotating around unknown centres, rather than simply moving outwards. This phenomenon came to be known as the galaxy rotation problem and it lent support to the theory that some other force was at work, namely dark matter.

During her career as an astronomer, Rubin examined more than 200 galaxies.

Word of the day

Xenophobia

Xenophobia is the fear or extreme dislike of all things foreign such as people from other countries, cultures and customs. Xenophobic attitudes are believed to stem from the fear of differences and the inhibition of exposure to new aspects. With increased immigration, many people have started embracing different cultures. However, the intermingling of cultures has also increased discrimination against certain communities as a result of xenophobia. Xenophobia at times overlaps with racism. Certain governments and international bodies have laws to prevent xenophobic practices. One such important document is the Vienna Declaration by the United Nations, which states that all countries should take measures to prevent and combat all forms of xenophobia and related intolerance.
